

Antibacterial Desk Mat

The Antibacterial Desk Mat is ideal for hot desking or smart working environments, where numerous people may share a single workstation.

A non-toxic, antibacterial additive is added during the moulding process, which is approved by the FDA and HSE.

The additive is non-carcinogenic, non-mutagenic and non-skin sensitising, so harmless to humans but deadly to bacteria.

The antibacterial agent in the desk mat prevents the bacteria's access to nutrients, meaning that 99.9% of them simply starve and die within 24 hours.

The antibacterial agent is UV stable, and impervious to UV light.

The underside of the Antibacterial Desk Mat features a non-slip finish for secure placement on all work surfaces, and it also has a 20mm deep lip along one edge, which ensures it remains in position.

It is constructed in 5mm thick, heavy gauge black polyurethane, measuring 625 x 465mm, but if you need a larger area the Large Antibacterial Desk Mat is also available at 900 x 500mm.

The desk mats are generally available from stock, for delivery within 2 weeks of ordering*.
(*Standard Black or Grey Finishes Only)

There are a number of other colours available, including red, orange, green, blue, purple, which are subject to minimum order quantity and an extended lead time.
