

### Fold Ergonomic Desk Mat

Fold Ergonomic Desk Mat provides a cushioned work surface, which can be particularly useful when placed over joints in tops on bench desks, creating a continuous padded area on the desk, which also minimises glare, for greater user comfort.

The underside features a non-slip finish to ensure secure placement on all work surfaces, and for further stability, the desk mat also has a 20mm deep lip along one long edge, which ensures it remains in position.

Constructed in 5mm thick, heavy gauge black polyurethane, the standard size Fold Ergonomic Desk Mat measures 625 x 465mm, to provide a generous work area, but if you need a larger space the Fold Large Desk Mat is also available at 900 x 500mm.

Fold Ergonomic Desk Mat is impregnated during the moulding process, with a non-toxic, antibacterial additive, which is approved by the FDA and HSE.

The additive is non-carcinogenic, non-mutagenic and non-skin sensitising, so completely harmless to humans but deadly to bacteria and bugs, thereby minimising the risk of transmission between users, and making it ideal for hot desking or smart working environments, where numerous people may share a single workstation.

Fold Desk Mats are generally available from stock, for delivery within a few days of ordering\*.  
(\*Standard Black Finish Only)

There are a number of other colours available, including white, grey and brown, subject to minimum order quantity.

The range has recently been extended to include some special colours, which are also subject to minimum order quantity:
