

Hot Desk Lockers

A dynamic, keyless, admin-free locker system where users self-claim lockers daily as needed using their access control card. Lockers do not have to be provided for the full quota of staff: only for as many as are likely to be in the building at any one time – saving space and cost - and a full security management audit trail can be maintained too.

Technical Drawing

Full height gloss finished lockers, combining Pink, Grey, Green and Purple doors interspersed between White laminate.

Option for manual combination locks, flush locks and electronic locks with the latest access control technology.

Hot Desk Lockers

Save 66% space

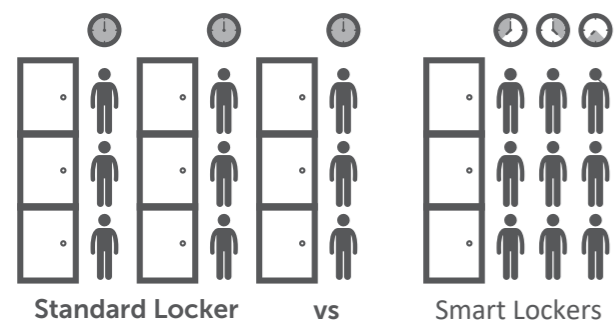

Smart investment for forward-thinking companies

The electronic locker system enables you to save space and money by sharing 1 locker to many staff. Providing a permanent locker for every employee is a significant investment in space and money. **Smart Lockers** allow you to allocate lockers dynamically and on an individual needs basis

Half of the UK's workforce is mobile

Dynamic locker management enables maximum efficiency. Claimed short-term lockers can be voided at a fixed time (for instance at night or after someone's shift ends) ensuring that employees don't occupy lockers unnecessarily. A central terminal can be consulted in case someone forgets their locker number or cannot find an available locker.

Save space using Smart Lockers

Example Configuration

Advantages

Keyless/codeless operation - no administration support or intervention required

One card, multiple uses - for a streamlined system and fewer items to carry.

Red/green indicator availability system

Simple LED lights let you know at a glance which lockers are available, for quick and hassle-free usability.

Integration with existing access control

Minimal administration with instant compatibility with existing building systems and access cards.

Dynamic or fixed locker assignment

Simple digital assignment (with pre-programmable options) saves space and money by maximising locker efficiency. Permanent locker assignment possible.

Wired locks & battery power option

Option of both wired and battery power available for constantly updated locker status and user activity for easy management and extra security.

Tamper-proof alarm

Immediate alarm in case of misuse – triggers security camera and sends a notification to your mobile.

Features and benefits:

- Save on administration costs with keyless self-service systems
- Quick and simple management
- Re-programmable means no expensive lock replacements when keys are lost or stolen
- Dynamic use of lockers lowers investment costs and required floor space
- Reduced administration time arranging locker allocation and key replacements
- Stand alone – no software needed
- Software/Network compatible
- Audit trail (if software purchased)
- No need for numbering
- No need for a handle on door

Options for readers:

- Cards – either any RFID or only 'whitelisted' cards
- Biometric (fingerprint)
- Barcode (eg printed badge for visitor)
- Pin code
- Coin
- Wrist band
- Amazon lockers – pin code texted to you
- Phone app coming soon!
