

SMART WALL STORAGE

Smart Wall Storage design is in direct response to our clients' requirements for a high density storage system with similar capacity to a mobile system and the simplicity of a cupboard..

The **Smart Wall Storage** system is a wall of double sided units that can be pulled out to reveal two sides of open storage and simply pushed back to close.

HEIGHTS: Can be manufactured to any size (increments of 25mm)

WIDTHS: 600mm ,900mm, 1000mm, 1200mm

DEPTHS: 350mm, 400mm, 450mm, 500mm, 600mm

The system can be finished in any RAL colour

All the units can be individually locked for security.

A sealed unit with a clean finish allows it to sit as comfortably in the centre of the workspace as it would against a wall.

The track is flat to the floor ensuring no trip hazards and offering a larger walk way than traditional storage.
